CHECK-BOX

CHECK-BOX

OPERATING PRINCIPLE ...

Forget about the paper pre start checklist!

Discover our **CHECK-BOX** system, the new way to inspect your material. Thanks to the electronic inspection, all checklists are registered with driver id, date, time and material number. You have access to all the checklists anytime you want, anytime you need.

A simple software allows you to create you own checklists and to assign them per material type (for example: font-loader checklist).

On forklifts, the **CHECK-BOX** touchscreen allows the checklist electronic entry and its registration.

PC APPLICATION: *to define and customize your checklists, enter your users and materials.*

You manage your users and materials lists and you have the possibility to assign one checklist per material.

Transmission on vehicle is done with a simple USB key.

PC APPLICATION: *to define and customize your checklists, enter your users and materials.*

Checklists are collected anytime you need : reports can contain all checklists or just blocking answers. All checklists can be printed separately.

MATERIAL DEVICE: for user log-in and checklist answers

The **CHECK-BOX** screen is a high-responsive touchscreen, waterproof and specially adapted to industrial environment. The operator has to identify himself with a PIN-code and then, has to answer to the questions (as previously defined in the software). Answers are automatically registered and available on demand.

* 2 identification modes: user or administrator
